

DR. ARTEM MOSKALEV

✉ ammoskalevartem@gmail.com |  amoskalev.github.io | ☎ +31 6 2711 7492

My research focuses on geometric deep learning and language models, with a keen interest in developing geometry-aware methods that efficiently learn from unlabeled data. I am driven by the challenge of scaling AI to tackle complex scientific problems that conventional methods struggle to solve.

WORK EXPERIENCE

Machine Learning Research Scientist

AI/ML for Drug Discovery

Johnson and Johnson

September 2023 - current

I work on combining geometric neural networks and large language models to advance molecule generation and representation learning, focusing on large molecules such as RNA and proteins. My work involves collaboration with stakeholders to clearly define a problem, preparing and curating datasets, and implementing and training machine learning models.

Machine Learning Intern

Generative Modeling and Computational Imaging

Samsung

May 2018 - August 2018

At Samsung, I worked on image enhancement and restoration. In particular, we were focusing on improving Generative Adversarial Networks (GANs) deblurring methods to alleviate restoration artifacts and hallucinations.

Research Assistant

PDE modelling of biological neurons

MSU Neuroscience

February 2016 - March 2017

My work involved mathematical modeling and embedded software engineering. I implemented PDE models to describe the behavior of the neurons under the mechanical influence.

EDUCATION

Ph.D. in Machine Learning

Advisor: prof. Arnold Smeulders

University of Amsterdam

August 2019 - September 2023

Research: geometric deep learning, self-supervised learning

Thesis: Representation Learning with Structured Invariance [\[link\]](#)

M.Sc. in Applied Mathematics

Advisor: prof. Anh-Huy Phan

Skolkovo Institute of Science and Technology

September 2017 - June 2019

Research: inverse problems, signal processing, convex optimization

Thesis: Trainable regularization for Wiener filter deconvolution (top 3%) [\[link\]](#)

RELEVANT SKILLS

- ◇ Coding: python, R, bash, C++ (basic)
- ◇ Libraries: pytorch, huggingface, pytorch-geometric, e3nn, jax, sklearn, cvxpy, amptide
- ◇ Systems and Platforms: Linux, Docker, Kubernetes, git, Slurm, Jenkins

ACADEMIC EXPERIENCE

Teaching assistant

Statistics, Simulation and Optimization

Statistical hypothesis testing, dynamic programming, simulation-based optimization.

University of Amsterdam

September 2019 - December 2022

Lecturer

Introduction to Image Processing

A graduate-level mini-course to introduce the basics of computational imaging algorithms.

Skolkovo Institute of Science and Technology

February 2019 - March 2019

Intern and Student Supervision
